PROFILE

Backend Software Engineer with 5 years of experience building, scaling, and optimizing high-throughput distributed systems. Shipped a custom, high-performance synthetic monitoring platform from scratch, completely ripping out an enterprise vendor and cutting operational costs by 90%. Contributed core C++ structural improvements to the Chromium browser engine (4 Billion+ weekly active users). Deeply specialized in C++, Rust, and Go, focused on writing efficient, low-level code, solving complex concurrency bottlenecks, and delivering highly reliable, low-latency backend infrastructure.

OPEN SOURCE CONTRIBUTIONS

Chromium

Engineering at Global Scale

Contributor

- Shipped core C++ structural improvements to the Chromium browser engine, tearing down monolithic dependencies in the file selection subsystem and aggressively paying down long-standing technical debt.

PROFESSIONAL EXPERIENCE

Macquarie Group

May 2025 – Present

Software Engineer - Executive

- Built and shipped a distributed agent orchestration platform to execute complex workflows across microservices, engineering built-in fault tolerance and deterministic replay capabilities from the ground up.
- Authored zero-dependency Rust CLI tools to automate cross-team service onboarding and CI/CD, aggressively cutting manual toil and accelerating deployment pipelines.
- Drove technical R&D by stress-testing and benchmarking backend frameworks for maximum throughput and resource efficiency; mentored junior engineers in concurrency, systems engineering, and writing robust code.

Macquarie Group

Nov 2023 – May 2025

Software Engineer - Senior Associate

- Engineered and maintained a high-performance synthetic monitoring platform in Go (Entgo) and Amazon RDS.
- Rebuilt complex enterprise capabilities in-house to rip out an expensive commercial vendor, driving a ~90% drop in operational costs.
- Developed a high-throughput, event-driven registry service capable of consuming, normalizing, and aggregating heavy cross-cloud message queue traffic, delivering real-time visibility into rolling 7-day deployment events.

Commonwealth Bank of Australia

Jan 2022 – Nov 2023

Technology Associate

- Wrote comprehensive Infrastructure-as-Code (Terraform/Helm) to automate the provisioning and scaling of Kubernetes clusters, systematically eliminating manual infrastructure bottlenecks.
- Squeezed startup latency and image size out of data-plane sidecar deployments by engineering lightweight, heavily optimized build artifacts using Packer.
- Hardened distributed infrastructure by rolling out strict Istio service mesh configurations and integrating HashiCorp Vault for centralized, secure secrets management.

EDUCATION

Macquarie University

Bachelor of Information Technology in Computer Science
